VO	luntary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	☐ Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	 Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.
Со	omments:

Arabidops

This is the amino acid sequence of soybean myo-inositol 1-phosphate synthase (MI 1-PS) deduced from the coding region of an isolated cDNA clone (see AAV62440). MI 1-PS is involved in glucose metabolism to phytic acid, raffinose and stachyose. A mutant MI 1-PS (see AAW79741) has been identified in soybean line LR33, a mutagenised line of low raffinose saccharide phenotype. Sequencing revealed a single base change mutation in the LR33 gene sequence that resulted in a K396N substitution in the mutant protein. The mutation results in a seed phenotype of very low raffinose saccharide sugars, very high sucrose and low phytic acid. The mutated nucleic acid is used to alter the raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds, leading to

The invention relates to a nucleic acid fragment encoding a soybean myo-
cc inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
cc synthase having a decreased capacity for the synthesis of myo-inositol 1-
cc phosphate. The invention also relates to a chimeric gene operably linked
cc results in a decrease in expression of an endogenous or native gene
cc encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
cc comprising the chimeric gene, a method of making the soybean plant, a
cc seed of the soybean plant, a soy protein product derived from the
cc processing of soybean seeds, a method of making the soybean plant a
cc least one gene encoding a mutant myo-inositol 1-phosphate synthase having
cc nucleic acid fragment and methods are useful for producing plants with
cc nucleic acid fragment and methods are useful for producing plants with
cc sucrose and inorganic phosphate content, leading to valuable and useful
cc soybean products. This sequence represents a mutant soybean myo-inositol
cc 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (HITZ/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                               results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product derived from the processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase havin decreased capacity for the synthesis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents a wild type soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase accepaced capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (HITZ/)

CC nucleic acid encoding soybean myo-inosito1 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably CC linked to suitable regulatory sequences, where expression of the chimeric Gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inosito1 1-phosphate synthase), a soybean plant C comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, a seed content of raffinose plus CC stachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR3), seeds CC from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR3) or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of CC an elite soybean plant and selecting a progeny plant of the cross of CC mutant myo-inosito1 1-phosphate synthase having decreased capacity for the synthesis of myo-inosito1 1-phosphate synthase having decreased capacity for the synthesis of myo-inosito1 1-phosphate synthase having decreased capacity for the synthesis of myo-inosito1 1-phosphate synthase having decreased capacity for the synthesis of myo-inosito1 1-phosphate, where the gene confers a comprise product derived from seeds of a soybean product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic contents of soybean seeds thus leading to valuable and useful conjugated in the presence of high concentration of raffinose oliposaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a wild-type myo-inosito1 1-phosphate synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
CC nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its Clinked to suitable regulatory sequences, where expression of the chimeric CC gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC comprising the chimeric gene (with a heritable phenotype of a seed phytic cid content of less than 17 micromol/g, as seed content of raffinose plus stachyose of less than 14.5 micromol/g, and a seed sucrose content of cype comprising crossing LR33 or the plant with the heritable phenotype of a seed seed sucrose content of comprising crossing LR33 or the plant comprising the chimeric gene with corossing step that has a heritable phenotype as mentioned above), seeds of soybean plant and selecting a progeny plant of the cross of corossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived crossing step that has a heritable phenotype as mentioned above), seeds of the synthesis of myo-inositol 1-phosphate, where the gene confers a companie content of soybean product derived from seeds of a soybean protein product derived from seeds of a soyb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase synthase having decreasing capacity for the synthase for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucrephytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Glycine max;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 3; SEQ ID NO 2; 34pp; English

Soybean plants containing altered myo-inositol-1-phosphate gene - usefu for generating plants with altered levels of e.g. raffinose, stachyose, phytic acid, etc.
                                                                                                                                                                                                      WPI; 1998-568353/48

saccharide phenotype. Sequencing revealed a single base change mutation in the LR33 gene sequence that resulted in a K396N substitution in the mutant protein compared to wild-type MI 1-PS (see AMM79740). The mutation results in a seed phenotype of very low raffinose saccharide sugars, very high sucrose and low phytic acid. The mutated nucleic acid is used to alter the raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds, leading to useful soybean products, e.g. a seed phytic acid content of less than 17 ug/g, a seed content of raffinose and stachyose combined of less than 17 ug/g, and a seed sucrose content greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field) This is the amino acid sequence of a mutant soybean myo-inositol 1-phosphate synthase (MI 1-PS) deduced from the coding region of an isolated cDNA clone (see ANAC2443). MI 1-PS is involved in glucose metabolism to phytic acid, raffinose and stachyose. The MI 1-PS was identified in soybean line LR33, a mutagenised line of low raffinose

                                                                                                                                                                                                                                  results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product derived from the processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents a mutant soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase accepacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Glycine max.

CC nucleic acid encoding soybean myo-inositol i-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably clinked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene conding a soybean myo-inositol i-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, aseed content of raffinose plus from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a firm seeds of a soybean plant (homozygous for one or more gene encoding a complement of the synthesis of myo-inositol 1-phosphate with seeds of a soybean product derived from seeds of a soybean plant with heritable phenotype as mentioned above), and making or producing a soybean product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for comprise an encoding a since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The presence represents a mutant myo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               inositol 1-phosphate synthase.

                                                                        CC The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC to suitable regulatory sequences, where expression of the chimeric gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making or producing a soy
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC mucleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents a mutant soybean myo-inositol
CC rephosphate synthase nolventiae of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ

New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean products.

Claim ω --SEQ IJ ö 16; 48pp; English.

The invention relates to a nucleic acid fragment encoding a soybean myoci cinositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
ci synthase having a decreased capacity for the synthesis of myo-inositol 1cy phosphate. The invention also relates to a chimeric gene operably linked
ci suitable regulatory sequences, where expression of the chimeric gene
ce encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
ce comprising the chimeric gene, a method of making the soybean plant, a
ce sed of the soybean seeds, a method of making the soybean plant, a
ce sed of the soybean seeds, a method of making or producing a soy
ce protein product and a method of using a soybean plant homozygous for at
ce least one gene encoding a mutant myo-inositol 1-phosphate synthase having
decreased capacity for the synthesis of myo-inositol 1-phosphate. The
ce nucleic acid fragment and methods are useful for producing plants with
ce concess and innorganic phosphate content, leading to valuable and useful
ce soybean products. This sequence represents a wild type soybean myoce inositol 1-phosphate synthase polypeptide of the invention.

The invention relates to an isolated nucleic acid fragment encoding a gybbean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the synthase, its complement, subfragment or the complement of the subfragment, operably clinked to suitable regulatory sequences, where expression of the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic comprising the chimeric gene (with a heritable phenotype of a seed phytic caid content of less than 17 micromol/g, as seed content of raffinose plus tachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds comprising trossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of crome the plant, making a soybean plant comprising the chimeric gene with comprising step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a complement of soybean plant (homozygous for one or more gene encoding a soybean protein product derived from seeds of a soybean plant with heritable phenotype as mentioned above), seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for comprising raffinose socharide, sucrose, phytic acid and inorganic phosphate somethate. The presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence represents a wild-type myo-inositol 1-phosphate some seeds of a sepacate a wild-type myo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   S
                                                    insituding in the content of the soybean plant, a seed of the soybean plant, a seed of the soybean plant, a seed of the soybean seeds, a method of making the soybean plant of protein product and a method of making or producing a soy protein product and a method of making or producing a soy contein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase having decreased capacity for the synthesis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased concerns and increased content. This sequence represents a mutant soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-APR-1997;

Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds.

Claim 9; SEQ ID NO 12; 34pp; English

CC omplement, subfragment or the complement of the subfragment operably
CC linked to suitable regulatory sequences, where expression of the chimeric
CC gene results in a decrease in expression of an endogenous or native gene
CC comprising the chimeric gene (with a heritable phenotype of a seed phytic
CC acid content of less than 17 micromol/g, a seed content of raffinose plus
CC stachyose of less than 18.5 micromol/g, and a seed sucrose content of
CC greater than 200 micromol/g, provided that the plant is not LR33), seeds
CC from the plant, making a soybean plant with the heritable phenotype
CC comprising crossing LR33 or the plant comprising the chimeric gene with
CC crossing step that has a heritable phenotype
CC crossing step that has a heritable phenotype as mentioned above), seeds
CC from seeds of a soybean plant (homozygous for one or more gene encoding a
CC from seeds of a soybean plant (homozygous for one or more gene encoding a
CC soybean product derived from seeds of a soybean plant with
CC soybean protein product derived from seeds of a soybean plant with
CC soybean product derived from seeds of a soybean plant with
CC soybean product derived from seeds of a soybean plant with
CC soybean product derived from seeds of a soybean plant with
CC soybean product derived from seeds of a soybean plant with
CC phosphate content of soybean seeds thus leading to valuable and useful
CC soybean products, since the presence of high concentration of raffinose
CC uniositol rephosphate synthase.
CC chosphate synthase. The invention relates to an isolated nucleic acid fragment encoding a stopbean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the inositol 1-phosphate synthase.
